

Global Plastic Pollution

KEY FACTS ABOUT PLASTIC POLLUTION

PRODUCTION HAS EXPLODED

Global plastic production reached approximately 400 million tonnes per year by 2024

ALMOST NONE OF IT GETS RECYCLED

Of the roughly 8.3 billion tonnes of plastic produced since the 1950s, only 9% has been recycled

MILLIONS OF TONS REACH THE OCEAN EVERY YEAR

With an equivalent of about 2,000 garbage trucks dumping plastic in the ocean

ENVIRONMENTAL IMPACT OVERVIEW

CAUSE

IMPROPER DISPOSAL OF PLASTIC WASTE

EFFECT

LAND AND WATER POLLUTION

EXCESSIVE USE OF SINGLE-USE PLASTICS

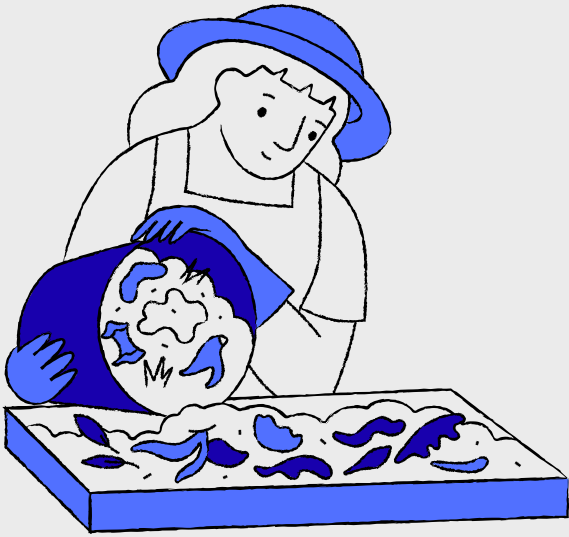

INCREASED PLASTIC ACCUMULATION AND WASTE

POOR WASTE MANAGEMENT AND LOW RECYCLING

HARM TO WILDLIFE, ECOSYSTEMS, AND HUMAN HEALTH

SOURCES OF PLASTIC POLLUTION

• SINGLE-USE PLASTICS

PACKAGING, BAGS, WRAPPERS, BOTTLES, STRAWS ACCOUNT FOR ABOUT 50% OF ANNUAL PRODUCTION.

• MISMANAGED HOUSEHOLD AND MUNICIPAL WASTE

LANDFILL OVERFLOW AND UNCOLLECTED LITTER THAT WASHES INTO WATERWAYS.

ALMOST 70% OF GLOBAL PLASTIC POLLUTION COMES FROM JUST 20 COUNTRIES — ABOUT 10% OF THE WORLD'S NATIONS.

SOLUTIONS TO REDUCE PLASTIC POLLUTION

REDUCE

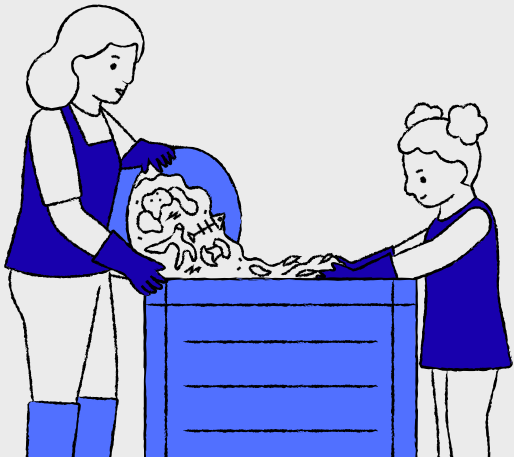

Avoid single-use plastics; use reusable bags and bottles.

RECYCLE

Dispose of plastics responsibly; check local recycling guidelines.

SMART SORTING

IoT-enabled bins that track fill levels and waste composition to prioritize collection before overflow reaches waterways.

Global plastic production reached approximately **400 million tonnes per year by 2024** — up from just 1.5 million tonnes in 1950.
